

FarmsKing Logistics & Shipping Operations Guide

Shipping, Courier Integration & Delivery Rules

1. Overview

FarmsKing utilizes the **Shiprocket API** infrastructure to handle pan-India logistics, linking with major carriers (Delhivery, BlueDart, Ekart, DTDC) for multi-vendor pickup and doorstep delivery.

2. 3 Flexible Delivery Modes

1. **FarmsKing Courier (Shiprocket):** Fully automated pickup from seller store and delivery to farmer.
2. **Seller Self-Delivery:** Designed for heavy equipment, machinery, or local tractor delivery.
3. **Local Store Pickup:** Farmers collect directly from the vendor's physical store with zero shipping cost.

3. The 50-50 Free Delivery Profit Split Rule

When a seller chooses to offer **Free Delivery** on an item, shipping fees are split **50-50%** between FarmsKing and the Seller.

Formula:

- **FarmsKing Earning** = Commission (10%) - (Shipping Fee / 2)
- **Seller Payout** = Price - Commission (10%) - (Shipping Fee / 2) - GST TCS (1%)

Example Breakdown (₹2000 Product, ₹400 Shipping Fee):

- Product Price: ₹2,000
- 10% FarmsKing Commission: ₹200
- Actual Shipping Fee: ₹400
- FarmsKing 50% Share of Shipping: ₹200

- Seller 50% Share of Shipping: ₹200
- **FarmsKing Final Earning:** ₹200 - ₹200 = ₹0 (FarmsKing covers its share via commission; zero out-of-pocket loss!).
- **Seller Final Payout:** ₹2000 - ₹200 - ₹200 = ₹1,600 (- 1% TCS).

4. Seller App Product Addition Interface

When sellers list products, the app dynamically displays:

1. **Volumetric Weight Calculator:** Auto-calculates shipping fee using dimensions (L x W x H) and weight.
2. **Shipping Choice:** Standard Customer Paid Delivery vs Free Delivery (50-50 split rule applied).
